Twenty-one Total Cases of West Nile Virus Found In Horses This Year – To Date

(Phoenix, AZ) -- Three new cases of West Nile Virus have been discovered in Pima, Yavapai and Pinal Counties in Arizona. Last year, the final case came through the first week of November, bringing last year's total to 109 cases in 11 counties. At this point last year, we had 86 confirmed cases.

The following is a list of cases so far this year, with the first case appearing on April 20, 2005.

- Maricopa County 8
- Apache County 2
- Yavapai County 3
- Pinal County 4
- Pima County 2
- Navajo County 2

West Nile Virus affects horses much more often than any other domestic animals. Many horses infected with West Nile Virus do not develop any illness, but of horses that become ill about one-third die or need to be euthanized. In general, other livestock and poultry do not show any illness if infected with West Nile Virus. Below are some common questions about West Nile Virus in horses.
